

## [Jul 21, 2022 Passing Key To Getting 2V0-51.21 Certified Exam Engine PDF [Q12-Q33]

[Jul 21, 2022] Passing Key To Getting 2V0-51.21 Certified Exam Engine PDF  
2V0-51.21 Exam Dumps Pass with Updated Jul-2022 Tests Dumps

### VMware 2V0-51.21 Exam Syllabus Topics:

TopicDetailsTopic 1- Troubleshoot common problems faced by horizon clients- Identify Horizon Enterprise components and subcomponentsTopic 2- Perform global entitlements and configure Home Site for user accounts- Collect valid and accurate information regarding problemsTopic 3- Identify when to use RDS Desktop Pool and Application Pool (RDSH farms)- Configure Group Policy Objects in HorizonTopic 4- Perform Day 2 operations and changes on desktop pools- Differentiate and match use cases with VMware productsTopic 5- Identify when to use command line tools- Identify use cases for pool configurationTopic 6- Describe the authentication and certificate options for a Horizon environment- Differentiate between VDI deployed on-premises or on cloud platformsTopic 7- Describe software-defined data center and the cloud infrastructure- Describe the interoperability of Horizon with other VMware productsTopic 8- Troubleshoot Horizon solution components- Create, manage, assign, provision and update an App Volumes Application Package

**Q12.** To reduce the risk of users downloading malware to the corporate network, an administrator wants to allow end users to open

only intranet websites inside their virtual desktop. Additionally, the administrator wants to configure all other URLs to automatically open in a browser on the end-user's client machine.

Which steps should the administrator take to meet the requirements? (Choose two.)

- \* Enable the URL Content Redirection feature on the desktop pool settings.
- \* Enable the URL Content Redirection feature in Horizon Agent.
- \* Configure group policy settings to indicate how Horizon Agent redirects the URL.
- \* Enable secure website settings in the Global Settings Security menu.
- \* Disable the Allow External Website feature in Horizon Agent.

**Q13.** Which two Windows Server Operating Systems are supported by VMware Horizon 8? (Choose two.)

- \* Windows Server 2019
- \* Windows Server 2008 R2
- \* Windows Server 2012
- \* Windows Server 2003 R2
- \* Windows Server 2016

**Q14.** An administrator sees a lot of instant-clone template VMs that are not in use anymore in vCenter.

What tool needs to be used to clean up old templates?

- \* iccleanup.cmd
- \* icunprotect.cmd
- \* vdmadmin.exe
- \* icmaint.cmd

**Q15.** An administrator is tasked with giving the security team non-destructive rights to see how the connection servers have been configured.

What privilege is needed to meet the requirement?

- \* Global Configuration and Policy Administrators (Read only)
- \* Inventory Administrators (Read only)
- \* Settings Administrator (Read only)
- \* Administrators (Read only)

**Q16.** Which two built-in apps are supported and automatically added to the profile of a multi-app kiosk profile? (Choose two.)

- \* Calculator
- \* Microsoft Word
- \* Microsoft Edge
- \* Camera
- \* Sticky Notes

**Q17.** Which of the following statements are true about Application Profiler?

- \* VMware Dynamic Environment Manager Agent and the Application Profiler cannot be installed on the same machine.
- \* Application Profiler is installed using VMware Dynamic Environment Manager Enterprise Setup Wizard and explicitly selecting local drive installation.
- \* Application Profiler is installed automatically when installing VMware Dynamic Environment Manager FlexEngine.
- \* Application Profiler is installed automatically when installing Dynamic Environment Manager Management Console.

**Q18.** An administrator wants to ensure users can access an application that uses .NET 3.0 for desktops available on Horizon On-premises and on Horizon Cloud Service on Microsoft Azure.

Which two options would achieve this requirement? (Choose two.)

- \* Capture the application in App Volumes.
- \* Create a ThinApp package and provision it with App Volumes.
- \* Install the application on the primary image.
- \* Copy the vmdk and .json file to the Azure storage.
- \* Copy the vhd and .json file to the Azure storage.

**Q19.** The virtualization of physical resources after installation of a hypervisor follows a specific procedure.

Drag and drop the procedural steps on the left into the correct sequential order on the right.

**Virtualization Procedural Step**

**Correct Sequence**

Create a VM and specify the required hardware to run a specific OS

Step 1

The hypervisor abstracts the physical resources into virtual hardware

Step 2

The hypervisor takes control of the physical resources of the host

Step 3

Install a guest operating system inside the VM, as done on a physical computer

Step 4

**Virtualization Procedural Step**

**Correct Sequence**

Create a VM and specify the required hardware to run a specific OS

Step 1

The hypervisor abstracts the physical resources into virtual hardware

The hypervisor abstracts the physical resources into virtual hardware

Step 2

The hypervisor takes control of the physical resources of the host

The hypervisor takes control of the physical resources of the host

Step 3

Create a VM and specify the required hardware to run a specific OS

Install a guest operating system inside the VM, as done on a physical computer

Step 4

Install a guest operating system inside the VM, as done on a physical computer

**Q20.** An administrator is tasked with reinstalling a Connection Server replica that has failed to boot.

Drag and drop the procedural steps on the left into the correct order on the right to add the replica back to the Horizon pod with the same name.

<u>Procedural Step</u>	<u>Correct Sequence</u>
Remove replica server from the pod using vdmadmin	Step 1
Power Off the failed replica server	Step 2
Deploy the new VM with the same name and install the Connection Server replica, pointing to one of the working connection servers in the pod	Step 3

<u>Procedural Step</u>	<u>Correct Sequence</u>
Remove replica server from the pod using vdmadmin	Step 1
Power Off the failed replica server	Step 2
Deploy the new VM with the same name and install the Connection Server replica, pointing to one of the working connection servers in the pod	Step 3

Q21. Drag and drop the TLS Configuration steps on the left into the correct sequential order on the right.

<u>TLS Certificate Configuration Step</u>	<u>Correct Sequence</u>
Modify the certificate-friendly name to vdm	Step 1
Import the TLS certificate into the Windows local computer certificate store	Step 2
Configure clients to trust the root and intermediate certificates	Step 3
Get a new signed TLS certificate from a CA	Step 4

### **TLS Certificate Configuration Step**

### **Correct Sequence**

- Modify the certificate-friendly name to vdm
- Import the TLS certificate into the Windows local computer certificate store
- Configure clients to trust the root and intermediate certificates
- Get a new signed TLS certificate from a CA

- Step 1 Get a new signed TLS certificate from a CA
- Step 2 Import the TLS certificate into the Windows local computer certificate store
- Step 3 Modify the certificate-friendly name to vdm
- Step 4 Configure clients to trust the root and intermediate certificates

**Q22.** A Horizon administrator is tasked with creating a new pool of desktops with hardware-accelerated graphics with vMotion support.

Which graphic acceleration types can the administrator choose to meet the requirement?

- \* Virtual Shared Direct 3D
- \* Virtual Shared 3D rendering
- \* Virtual Dedicated Graphics Acceleration
- \* Virtual Shared Pass-through Graphics Acceleration

**Q23.** Which two capabilities are supported by VMware Dynamic Environment Manager Application Profiler? (Choose two.)

- \* It allows individual user personalization of applications.
- \* It allows creation of computer templates.
- \* It allows third-party user personalization of applications.
- \* It allows creation of application-specific predefined settings.
- \* It analyzes registry and file system location settings for an application.

**Q24.** Which are the required permissions an administrator must assign to the user account for instant-clone operations in active directory before creating instant-clone desktop pools? (Choose three.)

- \* Write to service principal names
- \* Read and Write All Properties
- \* Modify Owner
- \* List contents
- \* Create and Delete Child objects
- \* Create and Delete Computer Objects

**Q25.** A user reports that sometimes they have issues using their remote desktops and published applications.

What three pieces of information should be collected to troubleshoot the issue? (Choose three.)

- \* What exactly did the user see on the screen when the issue occurred?
- \* Has the user reformatted recently to clean up old cached data?
- \* Does the user's home PC have the same problem?
- \* What time was it when the problem occurred?
- \* What was the user doing when the issue happened?

**Q26.** An administrator wants to provision a new Golden Image but doesn't see the VM in the list with golden images.

Which could be the cause of the issue? (Choose two.)

- \* No snapshot was made after optimizing the golden image.
- \* There is more than 1 active snapshot on the golden image.
- \* The golden image VM is not configured with a CD-ROM player.
- \* The wrong Guest OS Version was selected when creating the golden image.
- \* The golden image was not optimized.

**Q27.** What are three valid options to store Horizon events? (Choose three.)

- \* flat files
- \* MS SQL
- \* D82
- \* MYSQL
- \* syslog

**Q28.** Refer to the exhibit.

```
C:\Windows\System32\cmd.exe
Set log levels for VMware Horizon (8.3)
Checking the VMware Horizon role this computer plays by examining installed MSIs...
This computer has 'VMware Horizon Agent' installed
Please select a feature.
 1. All
 2. Virtual Channel [DEFAULT]
 3. Agent Core [DEFAULT]
 4. Blast [DEFAULT]
 5. PCoIP [DEFAULT]
 6. VDPService [DEFAULT]
 7. Remote Features
or...
 0. Reset to installation defaults
Choice [blank to exit]:
```

Which command is run to produce the output shown in the exhibit?

- \* C:\Program Files\VMware\VMware Horizon Agent\DCTsupport.bat loglevels
- \* C:\Program Files\VMware\VMware Horizon Agent\DCTsupport.bat setlogs
- \* C:\Program Files\VMware\VMware ViewAgent\DCTsupport.bat loglevels
- \* C:\Program Files\VMware\VMware ViewAgent\DCTsupport.bat setlogs

**Q29.** After creating a new desktop pool that contains customization specifications, a Horizon administrator sees the following message in the VMware Horizon event database:

Provisioning error occurred for Machine Machine\_Name: Customization failed for Machine Which two could be the cause of the issue? (Choose two.)

- \* The customization specification has been renamed or deleted.
- \* Desktops can only be customized after the end user logs into the virtual machine.

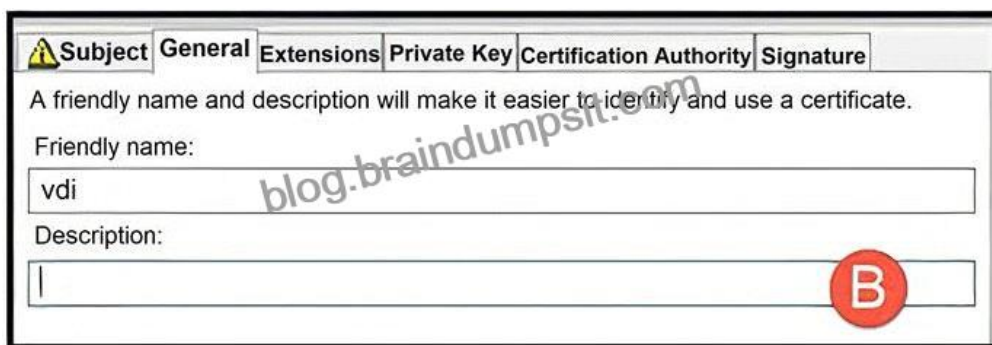

- \* The compute account of the template has been removed from the Active Directory.
- \* The administrator does not have sufficient permissions to access the customization specification.
- \* Desktop pool provisioning is disabled.

**Q30.** An administrator wants to ensure that user's desktop experience is consistent regardless of the desktop they connect to.

What solution should be used to meet the requirement?

- \* Persona Management
- \* Dynamic Environment Manager
- \* Local Profiles
- \* Temporary Profiles

**Q31.** Refer to the exhibit.

An administrator configures a CA certificate for the Connection Server. However, they are still encountering certificate warnings when trying to connect to the Connection Server. The exhibit displays the properties of the CA-Signed certificate.

Referring to the exhibit and using the alpha-character indicator, which image shows the root cause of the issue?

- \* D
- \* C
- \* A
- \* B

**Q32.** An administrator needs to monitor Connection Server health by using a http request.

Which command is the correct command to use?

- \* GET Error! Hyperlink reference not valid.
- \* GET Error! Hyperlink reference not valid.
- \* GET Error! Hyperlink reference not valid.
- \* GET Error! Hyperlink reference not valid.

**Q33.** An administrator notices that a cloud pod is not in the correct site.

What can be done to solve this issue?

- \* Under Settings > Cloud Pod Architecture, select the pod and change the name of the site.
- \* Under Settings > sites, select the site, and select move pod to this site.
- \* Under Settings > Cloud Pod Architecture, select the pod, click edit and select the correct site.
- \* Under Settings > sites, select the pod, click edit, and select the correct site from the menu.
