

## [Jul-2022 H35-560 Pre-Exam Practice Tests Exam Questions and Answers for HCIA-LTE Study Guide [Q31-Q47]

[Jul-2022] H35-560 Pre-Exam Practice Tests | Exam Questions and Answers for HCIA-LTE Study Guide  
HCIA-LTE-RNP&RNO V1.0 Certification Sample Questions

### NEW QUESTION 31

Which of the following adjustment measures has the highest priority?

- \* Antenna height
- \* Antenna direction angle antenna downtilt angle
- \* Antenna type

### NEW QUESTION 32

What are the evaluation methods for overlapping coverage issues? (Multiple choice)

- \* The number of cells with RSRP>-100dBm is greater than or equal to 2.
- \* The number of cells with RSRP>-100dBm is greater than or equal to 3.
- \* RSRP of the strongest cell-RSRP of the 3rd strongest (or 4th strongest) cell<6dB
- \* RSRP of the strongest cell-RSRP of the 3rd strongest (or 4th strongest) cell<3dB

### NEW QUESTION 33

The current frequency spectrum of China Mobile's F-band is 1880MHz to 1900MHz.

- \* True
- \* False

### NEW QUESTION 34

The SINR of each codeword can be obtained through the Probe drive test tool, and the higher the SINR, the better.

- \* True
- \* False

### NEW QUESTION 35

TD-LTE UE is set to trigger intra-frequency handover by A3 event. In order to reduce the trigger of A3 event, which of the following parameters can be increased? (multiple choice)

- \* eventA3offset
- \* cellIndividuaIOffset\_s
- \* cellIndividualOffset\_n
- \* hysteresis

### NEW QUESTION 36

The insertion loss of the cavity power divider is larger than that of the microstrip power divider.

- \* True
- \* False

### NEW QUESTION 37

RSRP reference signal received power refers to the average signal power received by all REs of a Symbol Bearer Reference Signal within the measured frequency bandwidth.

- \* True
- \* False

### NEW QUESTION 38

In the mobile communication system, what are the commonly used interference suppression methods? (multiple choice)

- \* Increase protective belt
- \* Apply to change frequency band
- \* Increase the isolation between antennas
- \* Install filter

### NEW QUESTION 39

During the test, the bit error rate below 20% is normal.

- \* True
- \* False

### NEW QUESTION 40

Open-loop spatial multiplexing does not require PMI feedback.

- \* True
- \* False

#### **NEW QUESTION 41**

What is included in the detailed survey of the base station? (multiple choice)

- \* Base station location
- \* Computer room construction
- \* Antenna selection
- \* Determine at least 3 alternative sites
- \* Equipment installation location

#### **NEW QUESTION 42**

During the X2 handover in the LTE system, if re-establishment occurs, which cells may be re-established? (Multiple choice)

- \* Source area
- \* ItemTarget area
- \* Third-party community
- \* Other cells in the source base station

#### **NEW QUESTION 43**

In an LTE network, an interface can be configured between eNODEB and MME. Which of the following is the interface name?

- \* S1
- \* S2
- \* X1
- \* X2

#### **NEW QUESTION 44**

The A3 or A4 event is used for LTE inter-system handover.

- \* True
- \* False

#### **NEW QUESTION 45**

In mobile communication systems, there are usually two ways to define/obtain KPL: eNodeB performance statistics and drive test tools for drive test.

- \* True
- \* False

#### **NEW QUESTION 46**

ASSTANT is a front-end test tool independently developed by Huawei, which can display test data, replay test data, and export test data.

- \* True
- \* False

#### **NEW QUESTION 47**

For the E-band of the LTE network, which system has the greatest impact on interference?

- \* GSM 900M
- \* GSM 1800M
- \* TD-SCDMA
- \* WLAN
