Passing Score, Duration & Questions For The VMware 2V0-72.22 Exam

Time Duration: 130 Minutes Number of Questions: 60 The passing score: 300 (scaled) Languages: English

NO.18 Which two statements are true concerning the BeanPostProcessor Extension point? (Choose two.)

- * BeanPostProcessors are called before the dependencies have been injected.
- * Custom BeanPostProcessors can be implemented for Spring applications.
- * BeanPostProcessors are called before the BeanFactoryPostProcessors.
- * BeanPostProcessors are called during the initialization phase of a bean life cycle.
- * BeanPostProcessors cannot be ordered in a Spring Boot application.

NO.19 Which two statements are true regarding Spring and Spring Boot Testing? (Choose two.)

- * EasyMock is supported out of the box.
- * @SpringBootTest or @SpringJUnit4Config can be used for creating an ApplicationContext.
- * Mockito spy is not supported in Spring Boot testing by default.
- * The spring-test dependency provides annotations such as @Mock and @MockBean.
- * Integration and slice testing are both supported.

NO.20 Which three dependencies are provided by the spring-boot-starter-test? (Choose three.)

- * Cucumber
- * Hamcrest
- * spring-test
- * Junit
- * EasyMock
- * PowerMock

NO.21 What are the two reasons Spring be used to build a Java application? (Choose two.)

- * Spring automates a Java application build.
- * Spring provides a Dependency Injection container.
- * Spring automates deployment of Java applications to all of the major cloud providers.
- * Spring provides comprehensive Java IDE support.
- * Spring provides abstractions over infrastructure such as persistence and messaging.

NO.22 Refer to the exhibit.

```
public interface CustomerRepository extends CrudRepository<Customer, Long>{  
}
```

Which statement is true? (Choose the best answer.)

- * CustomerRepository should be a class, not an interface.
- * JPA annotations are required on the Customer class to successfully use Spring Data JDBC.
- * An implementation of this repository can be automatically generated by Spring Data JPA.
- * A class that implements CustomerRepository must be implemented and declared as a Spring Bean.

NO.23 Which statement about @TestPropertySource annotation is true? (Choose the best answer.)

- * Java system properties have higher precedence than the properties loaded from

@TestPropertySource.

- * Properties defined @PropertySource are not loaded if @TestPropertySource is used.
- * @TestPropertySource annotation loads a properties file relative to the root of the project by default.
- * Inlined properties defined in @TestPropertySource can be used to override properties defined in property files.

NO.24 Refer to the exhibit.

```
ClientService service = applicationContext.getBean (ClientService.class);
```

It is a Java code fragment from a Spring application. Which statement is true with regard to the above example? (Choose the best answer.)

- * This syntax is invalid because the result of the getBean() method call should be cast to ClientService.
- * It will return a bean called ClientService regardless of its id or name.
- * This syntax is invalid because the bean id must be specified as a method parameter.
- * It will return a bean of the type ClientService regardless of its id or name.

NO.25 Which two statements are correct regarding the `@EnableAutoConfiguration` annotation? (Choose two.)

- * It is a meta-annotation on the `@SpringBootApplication` composed annotation.
- * It enables auto-configuration of the `ApplicationContext` by attempting to guess necessary beans.
- * It is meta-annotation on the `@SpringBootConfiguration` composed annotation.
- * It has the same effect regardless of the package of the class that is annotated with it.
- * It ensures auto-configuration is applied before user-defined beans have been registered.

NO.26 Refer to the exhibit.

```
@PutMapping("/accounts/{id}")  
public void update() {}
```

Which option is a valid way to retrieve the account id? (Choose the best answer.)

- * Add `@PathVariable("id") String accountId` argument to the `update()` handler method.
- * Add `@PathVariable long accountId` argument to the `update()` handler method.
- * Add `@RequestParam long accountId` argument to the `update()` handler method.
- * Add `@RequestParam("id") String accountId` argument to the `update()` handler method.

NO.27 Spring puts each bean instance in a scope. What is the default scope? (Choose the best answer.)

- * prototype
- * singleton
- * request
- * session

NO.28 What is a Spring Boot starter dependency? (Choose the best answer.)

- * A setting for specifying which code you want Spring Boot to generate for you.
- * A specific POM which you must build to control Spring Boot's opinionated runtime.
- * A pre-existing model project you can download and use as the basis of your project.
- * An easy way to include multiple, coordinated dependencies related to a specific technology, like web or JDBC.

NO.29 Which two options are REST principles? (Choose two.)

- * RESTful applications use a stateless architecture.
- * RESTful application use HTTP headers and status codes as a contract with the clients.
- * RESTful applications cannot use caching.
- * RESTful application servers keep track of the client state.
- * RESTful applications favor tight coupling between the clients and the servers.

NO.30 Which statement describes the `@AfterReturning` advice type? (Choose the best answer.)

- * The advice is invoked only if the method returns successfully but not if it throws an exception.
- * The `@AfterReturning` advice allows behavior to be added after a method returns even if it throws an exception.
- * The advice has complete control over the method invocation; it could even prevent the method from being called at all.
- * Typically used to prevent any exception, thrown by the advised method, from propagating up the call-stack.

NO.31 Which two statements are true regarding bean creation? (Choose two.)

- * A Spring bean can be explicitly created by annotating methods or fields by `@Autowired`.
- * A Spring bean can be implicitly created by annotating the class with `@Component` and using the component-scanner to scan its package.
- * A Spring bean can be implicitly created by annotating the class with `@Bean` and using the component-scanner to scan its package.
- * A Spring bean can be explicitly created using `@Bean` annotated methods within a Spring configuration class.

* A Spring bean can be explicitly created by annotating the class with @Autowired.

NO.32 Which three types can be used as @Controller method arguments? (Choose three.)

- * Locale
- * Principal
- * Language
- * Session
- * Request
- * HttpSession

What Do You Know About The Need For VMware 2V0-72.22 Exam

For the most part, there might be such a great amount to cover that you can't focus on what is actually significant. That is the reason you should attempt to discover assets and instruments that will help you in deciding if it's a VMware 2V0-72.22 Exam or not. There are numerous VMware 2V0-72.22 Questions that you can use to set up for this sort of assessment. These are extremely helpful as they enable you to comprehend the ideas better and think of them in an all the more clear manner. This will enable you to have the option to answer questions that might be posed to you during your assessment cycle.

The training test is another device that can be utilized to assist you with getting acclimated with the ideas and format of the assessment. This is something that will assist you with setting up for the genuine article when it comes time to take it.

As a matter of first importance, it is constantly useful to work in a group so as to improve your odds of finishing the assessment quicker and all the more effectively. You may have a few people who don't know about all parts of **VMware 2V0-72.22 Dumps** will help you to earn this certification. This doesn't mean they are inadequate in regard to information or insight.
