Exam Format: Multiple choice questions
Exam Length: Maximum of 90 questions
Language: English, with Japanese scheduled and others TBD
Passing score: 77% means 720 (on a scale of 100-900)
Exam Duration: 90 Minutes

Things to do before you decide to take the CompTIA N10-008 Exam

There are a few things to do before you decide to take the CompTIA N10-008 Exam. These tasks will help you gain more confidence when taking the exam and will also help you prepare for it.

Here are some of the things you should do before deciding to take the CompTIA N10-008 Exam:

The second thing is to read up on the tools and techniques commonly used by network professionals. A good place to start is with a list of frequently used Linux commands, since these are essential for your success as an IT professional. The first thing is to review the exam objectives that includes a review of all the topics covered on the test and what percentage of questions will be asked about each. This information is available on CompTIA's website and in a number of books and other study materials.

Check out these free resources for test prep and practice exams. You need to make sure that you have the right study materials.

Review sample questions and study materials provided by the CompTIA Network+ certification site. **CompTIA N10-008 Dumps** is the ideal solution for you. The most important things you are required to do before deciding to take the CompTIA N10-008 Exam is to read through the Network+ objectives list that has been given by CompTIA.

Get an idea of how much time you need to study. You can use your own timetable or an online calculator to figure out how much time you need to spend studying. Make sure that you know what your strengths and weaknesses are so that you can focus on them during the test. Get a good night's sleep before taking the test. Don't skip breakfast or lunch as this can lead to fatigue during the test.

NEW QUESTION 206

An IT director is setting up new disaster and HA policies for a company. Limited downtime is critical to operations. To meet corporate requirements, the director set up two different datacenters across the country that will stay current on data and applications. In the event of an outage, the company can immediately switch from one datacenter to another. Which of the following does this BEST describe?

- * A warm site
- * Data mirroring
- * Multipathing
- * Load balancing
- * A hot site

NEW QUESTION 207

While setting up a new workstation, a technician discovers that the network connection is only 100 full duplex (FD), although it is connected to a gigabit switch.

While reviewing the interface information in the switch CLI, the technician notes the port is operating at 100FD but Shows many RX and TX errors. The technician moves the computer to another switchport and experiences the same issues.

Which of the following is MOST likely the cause of the low data rate and port errors?

- * Bad switch ports
- * Duplex issues
- * Cable length
- * Incorrect pinout

NEW QUESTION 208

A new cabling certification is being requested every time a network technician rebuilds one end of a Cat 6 (vendor-certified) cable to create a crossover connection that is used to connect switches. Which of the following would address this issue by allowing the use of the original cable?

- * CSMA/CD
- * LACP
- * PoE+
- * MDIX

NEW QUESTION 209

A network switch was installed to provide connectivity to cameras monitoring wildlife in a remote location. The organization is concerned that intruders could potentially leverage unattended equipment in the remote location to connect rogue devices and gain access to the organization's resources. Which of the following techniques would BEST address the concern?

- * Configure port security using MAC filtering.
- * Manually register the cameras on the switch address table.
- * Activate PoE+ on the active switchports.
- * Disable Neighbor Discovery Protocol on the switch.

NEW QUESTION 210

A device is connected to a managed Layer 3 network switch. The MAC address of the device is known, but the static IP address assigned to the device is not. Which of the following features of a Layer 3 network switch should be used to determine the IPv4 address of the device?

- * MAC table
- * Neighbor Discovery Protocol
- * ARP table
- * IPConfig
- * ACL table

NEW QUESTION 211

A network technician is installing new software on a Windows-based server in a different geographical location. Which of the following would be BEST for the technician to use to perform this task?

- * RDP
- * SSH
- * FTP
- * DNS

NEW QUESTION 212

A technician is consolidating a topology with multiple SSIDs into one unique SSID deployment. Which of the following features will be possible after this new configuration?

- * Seamless roaming
- * Basic service set
- * WPA
- * MU-MIMO

NEW QUESTION 213

Which of the following would MOST likely utilize PoE?

- * A camera Most Voted
- * A printer
- * A hub
- * A modem

NEW QUESTION 214

An organization with one core and five distribution switches is transitioning from a star to a full-mesh topology Which of the

following is the number of additional network connections needed?

- * 5
- * 7
- * 10
- * 15

NEW QUESTION 215

Several end users viewing a training video report seeing pixelated images while watching. A network administrator reviews the core switch and is unable to find an immediate cause. Which of the following BEST explains what is occurring?

- * Jitter
- * Bandwidth
- * Latency
- * Giants

NEW QUESTION 216

A workstation is configured with the following network details:

IP address	Subnet mask	Default gateway
10.1.2.23	10.1.2.0/27	10.1.2.1

Software on the workstation needs to send a query to the local subnet broadcast address. To which of the following addresses should the software be configured to send the query?

- * 10.1.2.0
- * 10.1.2.1
- * 10.1.2.23
- * 10.1.2.255
- * 10.1.2.31

NEW QUESTION 217

A network administrator is trying to add network redundancy for the server farm. Which of the following can the network administrator configure to BEST provide this capability?

- * VRRP
- * DNS
- * UPS
- * RPO

NEW QUESTION 218

Which of the Mowing architectures reduces network latency by enforcing a limit on the number of switching devices on the frame's path between any internal hosts?

- * Spine and leaf
- * Software-defined network
- * Three-tiered
- * Collapsed core

NEW QUESTION 219

Which of the following uses the destination IP address to forward packets?

- * A bridge
- * A Layer 2 switch
- * A router
- * A repeater

NEW QUESTION 220

Which of the following systems would MOST likely be found in a screened subnet?

- * RADIUS
- * FTP
- * SQL
- * LDAP

NEW QUESTION 221

An engineer recently decided to upgrade the firmware on a router. During the upgrade, the help desk received calls about a network outage, and a critical ticket was opened. The network manager would like to create a policy to prevent this from happening in the future. Which of the following documents should the manager create?

- * Change management
- * incident response
- * Standard operating procedure
- * System life cycle

NEW QUESTION 222

The network administrator is informed that a user's email password is frequently hacked by brute-force programs. Which of the following policies should the network administrator implement to BEST mitigate this issue? (Choose two.)

- * Role-based access
- * Captive portal
- * Geofencing
- * Two-factor authentication
- * Complex passwords
- * Explicit deny

NEW QUESTION 223

An organization wants to implement a method of centrally managing logins to network services. Which of the following protocols should the organization use to allow for authentication, authorization and auditing?

- * MS-CHAP
- * RADIUS
- * LDAPS
- * RSTP

NEW QUESTION 224

A Fortune 500 firm is deciding on the kind of data center equipment to install given its five-year budget outlook. The Chief

Information comparing equipment based on the life expectancy Of different models. Which Of the following concepts BEST represents this metric?

- * MTBF
- * MTRR
- * RPO
- * RTO

NEW QUESTION 225

A website administrator is concerned the company's static website could be defaced by hackers or used as a pivot point to attack internal systems. Which of the following should a network security administrator

recommend to assist with detecting these activities?

- * Implement file integrity monitoring.
- * Change the default credentials.
- * Use SSL encryption.
- * Update the web-server software.
