Get The Important Preparation Guide With C_WZADM_01 Dumps Get Totally Free Updates on C_WZADM_01 Dumps PDF Questions

SAP C_WZADM_01 certification exam is an ideal choice for IT professionals who wish to develop their skills in managing the technical aspects of SAP Build Work Zone applications. Passing C_WZADM_01 exam demonstrates a high level of expertise in the design, development, deployment, and administration of SAP Build Work Zone applications, making it a valuable certification for individuals seeking to advance their careers in this field.

To prepare for the SAP C_WZADM_01 certification exam, candidates can take advantage of various training resources offered by SAP. These resources include classroom training, e-learning courses, and certification guides. Candidates can also take advantage of SAP's online community to connect with other professionals and share their experiences.

NO.25 What must you do as part of the initial product setup? (Choose two.)
* Complete configurator steps
* Run booster on SAP BTP

* Install business content package
* Set up trial account
As part of the initial product setup, you must complete the configurator steps to configure the product according to your specific requirements. You also need to set up a trial account to access the product and start using it. Running booster on SAP BTP and installing business content package are not typically part of the initial product setup process.

NO.26 Which tool can you use to add business apps to the Applications menu?
* Work Zone Configurator
* Administration Console
* Content Manager
* Channel Manager
Option C is therefore the correct answer.

Content Manager is a tool used to manage the content of the SAP Fiori launchpad, including adding and configuring tiles, groups, catalogs, and roles. With the Content Manager, administrators can customize the Applications menu and add new business apps to it.

Option A (“Work Zone Configurator”) is not a valid tool for adding business apps to the Applications menu. It is used to create and configure work zones in SAP Build. Option B (“Administration Console”) is also not the correct tool as it is used for administration tasks related to SAP Cloud Platform. Option D (“Channel Manager”) is also not the correct tool as it is used for managing channels in SAP Cloud Platform Mobile Services.

NO.27 What can be used to deploy UI Integration Cards to SAP Build Work Zone? (Choose two.)
* Admin Console in SAP Build Work Zone.
* SAP Business Application Studio.
* Command Line Interface (CLI)
* Content Manager
The correct options for deploying UI Integration Cards to SAP Build Work Zone are:

1. Admin Console in SAP Build Work Zone.

2. Content Manager

Therefore, options A and D are the correct answers. The Admin Console in SAP Build Work Zone can be used to deploy UI Integration Cards by uploading the card’s ZIP package, configuring the card’s properties, and assigning permissions. The Content Manager can be used to manage the content used in the cards, such as images, videos, and other assets. Options B and C are not relevant to deploying UI Integration Cards to SAP Build Work Zone.

NO.28 Which of the following scenarios is NOT an option for content package versioning?
* Automatic update only for patch versions
* Manual update for all versions
* Automatic update for all versions
* Manual update only for minor versions

NO.29 Which feed widget setting is used on the home page level to show all public feed updates?
* Public
* Global
* Home
* Company
The answer to this question depends on the specific website or platform being used, as different systems may use different terminology or settings for their feed widgets. However, based on the options provided, the most likely answer would be either

“Public.” or “Global.”

“Public.” typically refers to content that is visible to anyone who visits the website, while “Global.” could refer to content that is visible to all users of the platform, regardless of their location or other factors.

“Home” and “Company” settings are less likely to be used for this purpose, as they are typically more specific and targeted in terms of the content they display. “Home” could refer to a personalized feed of content tailored to the user’s interests or activity, while “Company” could refer to a feed of updates specifically related to a particular organization or business.

NO.30 What are some actions that external users CANNOT do? (Choose three.)
* Create workspaces
* Post in workspace forums
* Upload a custom profile picture
* Share user homepages with other external users
* Access My Workspace
The actions that external users CANNOT do are:

1. Create workspaces

2. Share user homepages with other external users

3. Access My Workspace

External users are usually restricted to a specific workspace or set of workspaces and do not have the same level of access and permissions as internal users. They cannot create workspaces or share user homepages with other external users, as these actions require elevated permissions. Additionally, they cannot access My Workspace, which is typically reserved for internal users. However, external users may be able to post in workspace forums and upload a custom profile picture, depending on the specific permissions granted to them by the workspace owner or administrator.

NO.31 Which of the following features can you enable as sections in a workspace? Note: There are 3 correct Answers to this question.
* Content
* Applications
* Messages
* Worl<pages
* Forums

NO.32 Which of the following characteristics applies to My Workspace, but not to other workspaces?
* External users have access to it.
* Other users cannot be invited.
* The layout can be based on templates.
* Multiple tabs can be created.
My Workspace is a personal workspace in Microsoft Teams that is unique to each user and allows them to customize their experience by adding multiple tabs. Other workspaces in Teams, such as team and group workspaces, also allow for customization but do not have the ability to create multiple tabs.

External users can be added to team and group workspaces, but not to My Workspace. Inviting other users is also possible in all workspaces, including My Workspace. The layout based on templates is a feature available in all workspaces in Teams.

NO.33 Which of the following can you use to create user lists in SAP Build Work Zone? (Choose two.)
* Digital Workplace Service admin UI
* Digital Workplace Service SCIM API
* SAP BTP subaccount admin UI
* SAP Cloud Identity Service SCIM API
The correct answers are A. Digital Workplace Service admin UI and D. SAP Cloud Identity Service SCIM API.

User lists can be created in SAP Build Work Zone using both the Digital Workplace Service admin UI and the SAP Cloud Identity Service SCIM API. The Digital Workplace Service admin UI provides a user-friendly interface for managing users, roles, and groups in SAP Build Work Zone. On the other hand, the SAP Cloud Identity Service SCIM API allows developers to programmatically manage user accounts and groups in SAP Build Work Zone.

The SAP BTP subaccount admin UI and the Digital Workplace Service SCIM API are not used for creating user lists in SAP Build Work Zone. The SAP BTP subaccount admin UI is used for managing subaccounts and services in SAP BTP, while the Digital Workplace Service SCIM API is used for managing users, groups, and roles in SAP Digital Workplace.

NO.34 What must you do to implement SAP Build Work Zone, advanced edition in a multi-tier landscape?
* Create multiple sites within a single subscription.
* Create multiple subscriptions in an SAP BTP subaccount.
* Create multiple services instances in an SAP BTP subaccount
* Create subscriptions in separate SAP BTP subaccounts.

NO.35 What is the most-used method to show business data on SAP Build Work Zone workpages?
* Chatbots
* API and Webhooks
* Launchpad Plugins
* UI Integration Cards

NO.36 Which of the following URL pattern represents the Digital Workplace Service component?
* https:/ /<subaccount subdomain> <work zone type>.cfapps.<DWS datacenter> hana.ondemand.com
* https://<DWS datacenter> <work zone type> <unique subdomain>.ondemand.com
* https://<unique subdomain> <DWS datacenter> <work zone type>.ondemand.com
* https:/ /<DWS datacenter> <work zone type> cfapps. <subaccount subdomain>hana.ondemand.com

NO.37 A user cannot access the administration console of SAP Build Work Zone.What could be a reason?
* Administrator permission in Digital Workspace Service is missing
* SAP BTP global account viewer role collection is missing
* SAP BTP subaccount viewer role collection is missing
* Space manager permission on SAP BTP subaccount level is missing
SAP Build Work Zone is a service provided by SAP BTP (Business Technology Platform). In order to access the administration console of SAP Build Work Zone, the user needs to have the appropriate permissions and roles assigned to them.

Option A, Administrator permission in Digital Workspace Service, is not relevant to accessing the administration console of SAP Build Work Zone.

Option B, SAP BTP global account viewer role collection, is also not relevant as it only provides the user with read-only access to the global account.

Option C, SAP BTP subaccount viewer role collection, provides the user with read-only access to a specific subaccount but does not grant access to the administration console of SAP Build Work Zone.

Option D, Space manager permission on SAP BTP subaccount level, is the correct answer as it grants the user the necessary permissions to access the administration console of SAP Build Work Zone on the subaccount level.

NO.38 In which component is the access to workspaces controlled?
* Role collections
* Digital Workplace Service
* XSUAA SCIM API
* Admin UI of the SAP BTP subaccount cockpit

NO.39 Which SAP Build Work Zone administrator types require an assignment of a role collection? Note: There are 3 correct Answers to this question.
* Company administrator
* Sub-Workspace administrator
* Support administrator
* Workspace administrator
* Area administrator

NO.40 Please match actions to the SCIM API user endpoints.POST /Users PATCH /Users/{id} GET /Users PUT

/Users/{id}
* Update the entire user profile
* Update specific fields of a user profile
* Create a user profile
* Return a list of user profiles

NO.41 In Content Federation, the exposed content is integrated at which of the following levels?
* Role
* Persona
* Role collection
* User Group
Content Federation is a term used to describe the process of integrating and sharing content across multiple systems, applications, or platforms. The content is typically exposed at the user level, which means that it can be accessed by individual users or groups of users who have been granted appropriate permissions.

Therefore, the answer to the question is D. User Group, as the exposed content is integrated and shared at the level of a group of users who have been identified and authorized to access the content.

NO.42 Where can knowledge base articles be created?
* In the central Content Manager
* In the workspaces Knowledge Base feature
* In the central Knowledge Base feature
* In My Workspace
