# [Q15-Q29 Get 100% Passing Success With True CTFL-AT Exam! [Nov-2023

Get 100% Passing Success With True CTFL-AT Exam! [Nov-2023 ISQI CTFL-AT PDF Questions - Exceptional Practice To ISTQB Certified Tester - Foundation Level Extension - Agile Tester NO.15 Which of the following sentences about the integration of development and testing activities in Agile projects is INCORRECT?

* While developers develop automated unit test scripts, testers write automated system level tests.
* Testers replace developers in writing unit test automation scripts.
* Developers write acceptance criteria and test cases, together with testers.
* Developers and testers may work as a pair to develop and test a feature.

NO.16 You have been asked to execute an exploratory testing session on Park & Ride system. The test charter has been titled as "Buy a bus ticket". As a result, a number of defects were reported, the titles of which are listed below.

Which defect is out of scope for the given test charter?

* Price for a bus ticket was calculated incorrectly.
* Failed to buy a bus ticket after 18:00.
* Failed to buy a bus ticket when the network connection to the Central System is down.
* Payment for parking ticket is restricted to cash only (no credit card supported).

NO.17 Which of the following describes the main purpose of a task management tool in agile projects?

* A task management tool is used by team members to share ideas and collaborate on assigned tasks.
* A task management tool is used to manage and track user stories, tests and other tasks.
* A task management tool is used to store source code and automated tests.
* A task management tool allows developers to continuously integrate their code.

NO.18 Which of the following statements about the benefits of the Agile processes promoting early and frequent feedback is NOT true?

* In Agile projects where feedback is provided early and frequently, defects and incorrect requirements are caught earlier and those problems can be fixed faster.
* Feedback from well-conducted Agile retrospectives can be used to positively affect the development process over the course of the next iteration.
* Early and frequent feedback enables the team to deliver the features that represent the highest business value to the customer first.
* Increasing the frequency of feedback and communication between all the stakeholders involved in Agile projects eliminates all communication problems.

NO.19 Which of the following would provide the MOST independence for testers working with agile teams?

* Testers are fully embedded in each Agile team to perform many of the testing tasks.
* Testers from an independent test team who do not get involved with the Agile team, but are assigned to do System Testing once all sprints are completed.
* Testers from an independent test team are assigned on-demand for the final days of each sprint.
* Testers from an independent test team are assigned to the Agile team at the beginning of the project, returning for re-assignment to a new agile team.

NO.20 Which agile development approach incorporates the following practices:

* a project is divided into iterations called sprints

* each sprint results in a potentially releasable/shippable product?
* Kanban
* Extreme Programming
* Continuous Integration
* Scrum

NO.21 You are a tester in an agile team. The user story you are due to test is still under development so your tests are blocked. The main issue holding progress on this user story is that the developer’s unit tests are constantly failing.

As an agile tester, which of the following actions should you take?
* Review the design of the problematic user story and improve it where possible.
* Create a bug report for each of your blocked tests.
* Work together with the developer, suggesting reasons why the tests are failing.
* Use the time to improve and automate existing test cases of other user stories.

NO.22 Which of the following statements about the Planning poker test estimate technique are CORRECT?

1) Planning poker is a consensus based technique using a deck of cards.

2) A low test estimate usually means the story should be broken down into multiple smaller stories.

3) A high test estimate usually means the story should be broken down into multiple smaller stories.

4) One poker round is played and then consensus has to be reached.

5) The risk level of each backlog item should be decided before the poker session.
* 1, 3, 5
* 1, 2, 3

* 2, 3, 4
* 1, 2, 4

NO.23 Which of the following is a risk that continuous integration introduces?
* Teams sometimes over-rely on unit tests and exclude some important system and acceptance tests.
* Testers sometimes have too many builds to test, which reduces the quality of testing.
* Teams no longer have the ability to run manual tests, as all tests must be automated.
* Developer’s workload is increased, which can result in a reduction of output.

NO.24 Which of the following statements is FALSE regarding early and frequent feedback?
* Early feedback decreases the amount of time needed for system testing.
* Early feedback promotes early discovery and resolution of quality problems.
* Early feedback provides the Agile team with information on its productivity.
* Early feedback helps to deliver a product that better reflects what the customer wants.

NO.25 Which tasks are typically performed by a tester on an Agile project?

1) Implementing test strategy.

2) Documenting business requirements.

3) Measuring and reporting test coverage.

4) Coaching development team in relevant aspects of testing.

5) Executing test-driven development tests.
* 2, 5
* 2, 4, 5
* 1, 3, 4
* 1, 3

NO.26 You are working in a team preparing a bank loan application. Your task is the preparation of acceptance tests for the following user story:

“IF a customer needs a loan for less than 50,000 Euros and they have made repayments regularly (without any delay) and the customer’s monthly income is more than 3000 Euros for the last year, THEN the bank will accept the loan request; in other cases, the bank will not accept the request. A customer assistant is responsible for preparing data for approval but the approval is done by the bank manager.” Which of the following test cases can be treated as acceptance test criteria for the above user story?

1) As a customer assistant I can log in to the system and check the history of the customer account for the last year.

2) As a customer assistant I can log in to the system and check the history of the customer debts and repayments.

3) As a customer assistant I can log in to the system and change my password.

4) As a bank manager I can log in to the system and receive the information of all requests waiting for approval.

5) As a bank manager I can log in to the system and decide whether to approve a loan for a customer.

6) As a bank manager I can log in to the system within 10 seconds.

* Acceptance test criteria are 1, 2, 3 and 6

* Acceptance test criteria are 1, 3, 4 and 5

* Acceptance test criteria are 2, 4, 5 and 6

* Acceptance test criteria are 1, 2, 4 and 5

NO.27 What is the main benefit of the Test Pyramid?

* It means testing is involved early in the development cycle.

* It helps in evaluating the amount of test cases needed.

* It shows complexity of testing activities.

* It acts as a metric for testing progress.

NO.28 Which of the following statements would you expect to be the MOST direct advantage of the whole-team approach?

* Having at least once a day an automated build and test process that detects integration errors early and quickly.

* Avoiding requirements misunderstandings which may not have been detected until later in the development cycle when they are more expensive to fix.

* Capitalizing on the combined skills of business representatives, testers and developers working together to contribute to project success.

* Reducing the involvement of business representatives because of the increased communication and collaboration between testers and developers.

NO.29 Which of the following sentences related to Risk-based testing is CORRECT?

* Risk-based testing fits well in Agile development processes, as risks are analyzed twice – during release and iteration planning.

* Risk-based testing does not fit well in Agile development processes, as short iterations mandate short test times.

* Risk-based testing does not fit in Agile development processes, as each iteration focuses on limited parts of the product.

* Risk-based testing fits well in Agile development processes, as risks are easy to identify when the work is divided into user stories.
